The GD&T Trainer can be used to learn GD&T, brush up on skills, for certification, and as a resource when training is done.

**The GD&T Trainer Professional Edition – LAN (Local Area Network)** For companies who want to maximize employee time, the LAN version is the most productive. It allows multiple professionals to train concurrently, right from their desktops. The administrator can register students and track individual results, but there is no need to create training schedules, since this version allows employees to train simultaneously at their own workstations. *This version allows registration and training by multiple users on a LAN system. The number of users is dependent upon amount of seats purchased.*

**The GD&T Trainer Professional Edition – Multi-User** Designed for one or more users on a stand-alone PC, the multi-user is ideal for companies who want affordable, consistent, onsite GD&T training. Register and set up a training schedule for multiple users on one non-networked computer, allowing them to train at different times of day. An administrator can track individual results. *This version allows registration and training by multiple users on a single PC. It cannot be loaded onto a LAN system.*

**The GD&T Trainer Professional Edition – Single-User** Designed for use by one person on a stand-alone PC, the single-user is ideal for anyone who wants convenient, affordable GD&T training at home. This version contains author's comments, audio, and a tutorial, but does not provide administration and reporting tools. *This version allows registration and training by one individual on a single PC. It is not sold to companies, and it cannot be loaded onto a LAN system.*

**The GD&T Trainer Personal Version** Designed for use by one person on a stand-alone PC, the Personal Version is ideal for anyone who wants convenient, affordable GD&T training at home. The software can be used to learn the fundamentals or improve upon GD&T skills. It can also be used as a resource when training is done. The Personal Version cannot be used for certification, and it does not contain author's comments, audio, or a tutorial. It has no administration and reporting tools. *This version allows registration and training by one individual on a single PC. It is not sold to companies, and it cannot be loaded onto a LAN system.*

GD&T Trainer Site and Corporate Licenses are also available. Call 800-886-0909 to discuss which GD&T Trainer is right for you and your company.
